

The CG Railway, Inc. (CGR) offers reliable, competitive logistics services via rail ferry between the United States, Canada, and Southern Mexico.

The CGR uses FMS for better equipment utilization in Mexico, providing superior customer service and helping to reduce car hire cost. The railroad has come to rely on FMS to get the answers to a variety of customer status requests, using the system to gather dependable and accurate date location and transit times.

FMS reports—both “canned” and “customizable”—meet the information needs of even the most demanding CGR customer. Using FMS saves the CGR an average of 5 to 10 hours a week.
