RMI Announces New Rail Operations Software Products for Shippers and 3PLs at IANA-NITL 2011

Atlanta, GA – [RMI](#), the largest independent provider of rail Transportation Management Software and comprehensive information services, introduced [Transload Management](#) and [Demurrage Management](#) as the newest additions to its [ShipperConnect](#) software platform at the 2011 IANA-NITL Conference held in Atlanta, GA, on November 14-15.

“We were delighted with the response to our newest [ShipperConnect](#) offerings for rail shippers and 3PLs at the IANA-NITL Conference. Our existing shipper customers and new prospects have confirmed the need for rail operations software to help them manage inventory, transload operations, and demurrage and detention charges,” said [Paul Pascutti](#), Vice President of Sales at RMI.

ShipperConnect Transload Management is a terminal management software solution used by terminal operators to manage, control, and process inventory at rail transload facilities. ShipperConnect Demurrage Management software manages and calculates rail car demurrage, detention and storage charges and monitors and captures railroad events that trigger demurrage liability.

Pascutti added, “Our new software offerings leverage real-time data, maximize rail operations performance, and help our customers save time and money.”

The addition of Transload Management and Demurrage Management expand RMI’s ShipperConnect software offerings for industrial shippers and 3PLs and helps them manage, execute, and plan rail shipments. The IANA-NITL Conference is the premier freight transportation exhibition for companies to showcase the latest innovations in information technology and management tools.

About RMI

RMI is the largest independent provider of Transportation Management Software and comprehensive information services to railroad industry. Founded in 1979, RMI leverages in-depth knowledge of rail operations, intermodal terminal operating systems, and multi-modal transportation management to provide Software as a Service and licensed solutions to railroads and industrial shippers. RMI’s software is used to manage rail and intermodal operations, signal and communication assets, railcar repair billing and inventory, and multi-modal visibility, planning, and execution for industrial shippers and logistics service providers. RMI is a portfolio company of The Carlyle Group. For more information about RMI software and services please visit www.rmiondemand.com.
