RMI Exhibits at APTA Expo 2011

Atlanta, GA – RMI, the largest independent provider of Transportation Management Software and comprehensive information services to the rail industry, announced today it will participate in the American Public Transportation Association's (APTA) Expo in New Orleans, LA. RMI will feature its RailDOCS software solutions. RailDOCS is the leading turnkey solution for planning, managing, and optimizing the daily operations of railroad maintenance.

RMI will offer live product demonstrations and introduce new product offerings designed to assist rail industry customers to meet the growing demand for asset management, test inspections, and industry regulations and compliance.

RailDOCS [Tests and Inspections](#) system is used by the majority of North America's railroads to standardize signal maintenance testing. RailDOCS [Configuration Management](#) system allows railroads to safely and efficiently maintain critical and non-critical software and hardware.

Martin Paget, RMI Vice President for RailDOCS, said "RailDOCS saves our rail customers time by removing the need to produce, mail, check, and file paper reports both internally and to the governing regulatory bodies. Thus, our products assist our customers in complying with all regulatory agency requirements, providing the rail industry a safe, reliable, and efficient method of maintaining their crucial infrastructure."

The APTA EXPO is public transit's premier showcase of technology, products and services for railway engineering, maintenance, and repair departments. The APTA EXPO is being held October 3-5, 2011. RMI will exhibit in booth 3748.

About RMI

RMI is the largest independent provider of Transportation Management Software and comprehensive information services to the railroad industry. Founded in 1979, RMI leverages in-depth knowledge of rail operations, intermodal terminal operating systems, and multi-modal transportation management to provide Software as a Service and licensed solutions to railroads and industrial shippers. RMI's software is used to

manage rail and intermodal operations, signal and communication assets, railcar repair billing and inventory, and multi-modal visibility, planning, and execution for industrial shippers and logistics service providers. RMI is a portfolio company of The Carlyle Group. For more information about RMI software and services please visit www.rmiondemand.com.
